SKILLS

Teamwork
Problem-solving
Flexibility
Adaptability
Category B driving license

HOBBIES

Motorsport, traveling, reading (e.g., essays, comics)

PROFILE

Third-year student in Chemical and Biochemical Engineering at the University of Bologna.

EXPERIENCES

BONFIGLIOLI RIDUTTORI SPA - MECHANICS PROJECT

Participation in a mechanics and mechatronics project at the company, where I gained a deeper understanding of the integration between mechanical and electronic systems in an industrial setting.

BUSINESS GAME - FELSINEA RISTORAZIONE

Development of a delivery project in compliance with HACCP regulations, aimed at gaining experience in managing and resolving real problems the company encountered during the service design.

BIG DATA PROJECT- ICONSULTING

Collaboration with Iconconsulting for healthcare big data analysis (correlation between heart disease and the distance from the nearest specialized care center). Working as a team, we presented a potential solution to the identified problem using specific big data analysis software. Acquired skills in managing and interpreting large datasets through specialized software.

POLITECNICO DI MILANO - IT COURSE

English-taught Python programming course, with an in-depth focus on Pygame. The course concluded with a final group project, which involved creating a video game.

FORMULA STUDENT- UNIBO MOTORSPORT TEAM

Since March 2024, I have been a member of the Unibo Motorsport Team in the E-Powertrain department. I coordinate a small team for the development and thermal management of the hybrid prototype. I was responsible for the cooling characterization of the electric motors, as well as the design and validation of the battery pack cooling system. Additionally, I oversaw the experimental testing phase for the integration of a cooling air filtration system to protect the pack's components.

EDUCATION

HIGH SCHOOL DIPLOMA- LICEO MALPIGHI BOLOGNA

Scientific High School - Applied Sciences
